SLRS048A – MAY 1998 – REVISED APRIL 2000

- **SN75LBC031 Meets Standard ISO/DIS 11898 (up to 500 k Baud)**
- **Driver Output Capability at 50 mA**
- **Wide Positive and Negative Input/output Bus Voltage Range**
- **Bus Outputs Short-Circuit-Protected to Battery Voltage and Ground**
- **Thermal Shutdown**
- **Available in Q-Temp Automotive**
 - **HighRel Automotive Applications**
 - **Configuration Control/Print Support**
 - **Qualification to Automotive Standards**

description

The SN75LBC031 is a CAN transceiver used as an interface between a CAN controller and the physical bus for high speed applications of up to 500 kBaud. The device provides transmit capability to the differential bus and differential receive capability to the controller. The transmitter outputs (CANH and CANL), feature internal transition regulation to provide controlled symmetry resulting in low EMI emissions. Both transmitter outputs are fully protected against battery short circuits and electrical transients that can occur on the bus lines. In the event of excessive device power dissipation the output drivers are disabled by the thermal shutdown circuitry at a junction temperature of approximately 160°C. The inclusion of an internal pullup resistor on the transmitter input ensures a defined output during power up and protocol controller reset. For normal operation at 500 kBaud the ASC terminal is open or tied to GND. For slower speed operation at 125 kBaud the bus output transition times can be increased to reduce EMI by connecting the ASC terminal to V_{CC}. The receiver includes an integrated filter that suppresses the signal into pulses less than 30 ns wide.

The SN75LBC031 is characterized for operation from –40°C to 85°C. The SN65LBC031 is characterized for operation from –40°C to 125°C. The SN65LBC031Q is characterized for operation over the automotive temperature range of –40°C to 125°C.

(TOP VIEW)**

TERMINAL FUNCTIONS

TERMINAL	DESCRIPTION
$\overline{\text{TX}}$	Transmitter input
GND	Ground
V _{CC}	Supply voltage
$\overline{\text{RX}}$	Receiver output
REF	Reference output
CANL	Low side bus output driver
CANH	High side bus output driver
ASC	Adjustable slope control

FUNCTION TABLE

$\overline{\text{TX}}$	CANH	CANL	BUS STATE	$\overline{\text{RX}}$
L	H	L	Dominant	L
High or floating	Floating	Floating	Recessive	H

L = low, H = high

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Logic supply voltage, V_{CC} (see Note 1)	7 V
Bus terminal voltage	-5 V to 20 V
Input current at \overline{TX} and ASC terminal, I_I	± 10 mA
Input voltage at \overline{TX} and ASC terminal, V_I	$2 \times V_{CC}$
Operating free-air temperature range, T_A : SN65LBC031, SN65LBC031Q	-40°C to 125°C
SN75LBC031	-40°C to 85°C
Operating junction range, T_J	-40°C to 150°C
Continuous total power dissipation at (or below) 25°C free-air temperature	See Dissipation Rating Table
Storage temperature range, T_{Stg}	-65°C to 150°C
Case temperature for 10 sec T_C , D package	260°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values, except differential bus voltage, are measured with respect to GND.

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	OPERATING FACTOR ABOVE $T_C = 25^\circ\text{C}$	$T_C = 125^\circ\text{C}$ POWER RATING
D	725 mW	5.8 mW/°C	145 mW

SLRS048A – MAY 1998 – REVISED APRIL 2000

recommended operating conditions

		MIN	NOM	MAX	UNIT
Logic supply voltage, V_{CC}		4.5	5	5.5	V
Voltage at any bus terminal (separately or common mode), V_I or V_{IC} (see Note 3)		-2		7	V
High-level input voltage, V_{IH}	\overline{TX}	2		V_{CC}	V
Low-level input voltage, V_{IL}	\overline{TX}	0		0.8	V
High-level output current, I_{OH}	Transmitter			-50	mA
	Receiver			-400	μ A
Low-level output current, I_{OL}	Transmitter			50	mA
	Receiver			1	
Operating free-air temperature, T_A	SN75LBC031	-40		85	$^{\circ}$ C
	SN65LBC031, SN65LBC031Q	-40		125	

NOTES: 2. All voltage values, except differential bus voltage, are measured with respect to the ground terminal.
3. For bus voltages from -5 V to -2 V and 7 V to 20 V the receiver output is stable.

SYMBOL DEFINITION

DATA SHEET PARAMETER	DEFINITION
$V_O(\text{CANHR})$	CANH bus output voltage (recessive state)
$V_O(\text{CANLR})$	CANL bus output voltage (recessive state)
$V_O(\text{CANHD})$	CANH bus output voltage (dominant state)
$V_O(\text{CANLD})$	CANL bus output voltage (dominant state)
$V_O(\text{DIFFR})$	Bus differential output voltage (recessive state)
$V_O(\text{DIFFD})$	Bus differential output voltage (dominant state)
$V_I(\text{ASC})$	Adjustable slope control input voltage

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_O(\text{REF})$	Reference source output voltage	$I_{REF} = \pm 20 \mu\text{A}$	$0.45 V_{CC}$		$0.55 V_{CC}$	V
$R_O(\text{REF})$	Reference source output resistance		5		10	k Ω
$I_{CC}(\text{REC})$	Logic supply current, recessive state	See Figure 2, S1 closed		12	20	mA
$I_{CC}(\text{DOM})$	Logic supply current, dominant state			55	80	

SN65LBC031, SN65LBC031Q, SN75LBC031 HIGH-SPEED CONTROLLER AREA NETWORK (CAN) TRANSCEIVERS

SLRS048A – MAY 1998 – REVISED APRIL 2000

transmitter electrical characteristics over recommended ranges of supply and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{O(CANHR)}$ $V_{O(CANLR)}$	Output voltage (recessive state)	See Figure 2, S1 open	2	$0.5V_{CC}$	3	V
$V_{O(DIFFR)}$	Differential output voltage (recessive state)		-500	0	50	mV
$V_{O(CANHD)}$ $V_{O(CANLD)}$	Output voltage (dominant state)	See Figure 2, S1 closed	2.75	3.5	4.5	V
$V_{O(DIFFD)}$	Differential output voltage (dominant state)		0.5	1.5	2.25	
$I_{IH(TX)}$	High-level input current (TX)	$V_{IH} = 2.4\text{ V}$		-100	-185	μA
		$V_{IH} = V_{CC}$			± 2	
$I_{IH(ASC)}$	High-level input current (ASC)	$V_{IH} = 2.4\text{ V}$		100	165	μA
		$V_{IH} = V_{CC}$		200	340	
$I_{IL(TX)}$	Low-level input current ($\overline{\text{TX}}$)	$V_{IL} = 0.4\text{ V}$		-180	-400	μA
$I_{IL(ASC)}$	Low-level input current (ASC)	$V_{IL} = 0.4\text{ V}$		15	25	μA
$C_I(TX)$	$\overline{\text{TX}}$ input capacitance			8		pF
$I_{O(ssH)}$	CANH short circuit output current	$V_{O(CANH)} = -2\text{ V to } 20\text{ V}$		-95	-200	mA
$I_{O(ssL)}$	CANL short circuit output current	$V_{O(CANL)} = 20\text{ V to } -2\text{ V}$		140	250	mA

NOTE 2: All voltage values, except differential bus voltage, are measured with respect to the ground terminal.

transceiver dynamic characteristics over recommended operating free-air temperature range and $V_{CC} = 5\text{ V}$

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{(loop)}$	Loop time	See Figures 2 and 3, $V_I(ASC) = 0\text{ V}$ or open circuit, S1 closed, S2 open			280	ns
		See Figures 2 and 3, $V_I(ASC) = V_{CC}$, S1 closed, S2 closed			400	ns
$SR(RD)$	Differential-output slew rate (recessive to dominant)	See Figures 2 and 4, $V_I(ASC) = 0$ or open circuit, S1 closed, S2 open		35		V/ μs
		See Figures 2 and 4, $V_I(ASC) = V_{CC}$, S1 closed, S2 closed		10		V/ μs
$SR(DR)$	Differential-output slew rate (dominant to recessive)	See Figures 2 and 4, $V_I(ASC) = 0$ or open circuit, S1 closed, S2 open		10		V/ μs
		See Figures 2 and 4, $V_I(ASC) = V_{CC}$, S1 closed, S2 closed		10		V/ μs
$t_{d(RD)}$	Differential-output delay time	See Figure 2, S1 closed		55		ns
$t_{d(DR)}$				160		ns
$t_{pd(RECRD)}$	Receiver propagation delay time	See Figures 2 and 5		90		ns
$t_{pd(RECDR)}$				55		ns

NOTE 4: Receiver input pulse width should be >50 ns. Input pulses of <30 ns are suppressed.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
